

# Full-stack Engineer

**Job opening (Full-time)**

**Starting date : ASAP**

ZUMI is revolutionizing the apparel supply chain in Africa. Our ecommerce solution connects players in the apparel supply chain to help them secure better pricing, reduce time and cost of delivery, and access affordable financial services that transform their business through growth.

We are currently hiring a full-stack Engineer to join our Tech team and support the business at this exciting stage of scale.

## What you will do

- Work on our main React Native App allowing our users to order, follow and receive their orders seamlessly
- Build powerful features around inventory real-time updates, intelligent mapping and gamified promotions and any new features coming on the product roadmap
- Develop and manage well-functioning databases and applications
- Diagnose and fix bugs and performance bottlenecks for performance that feels native
- Test software to ensure responsiveness and efficiency.
- Maintain code, always push for best practices to ensure the product is of the highest quality
- Continuously refactor applications and architectures to maintain high quality levels.

- Be responsible for bringing great user experience and design to life.

## Who you are

- Driven, a self-learner with an ability to solve complex problems.
- Capable of leaving your ego at the door.
- 2-3 years of experience in software development or a serious open source track record. Hands-on experience in designing, developing, testing and deploying applications large scale applications in any language or stack.
- You know that the technology landscape changes rapidly and enjoy keeping up to date by experimenting with new frameworks.
- You are as comfortable working with clients and designers as with hard-core techies.

## Who we are

We are building a top-notch cross-functional team at ZUMI where tech is leveraged to transform the informal apparel sector. For that, we are following best-in-class principles :

- **Agile but not autocratic** : We are working with an Agile methodology, we follow sprints with the according ceremonies but we know when its urgent and where processes of the scrum will always paralyze our small team
- **Ship to learn** : the release of a feature isn't the last step for the tech team, we define success metrics before hand, we follow closely and we iterate on our solutions
- **Empathy for our users** : Everything we are building comes from problems we heard from users themselves in the discovery phase, we only challenge ourselves to bring the best solution to our users.

Tech is as good as its users.

## **What we will offer**

- Competitive compensation
- Flexibility for remote work several days/ week
- A technical and design challenge unique to the region
- Working beside outstanding colleagues with a track record in ecommerce in both emerging and developed markets
