Outbox Senior Software Engineer Job Description

We are looking for a full time Senior Software Engineer to join our growing Engineering team and build software that solves real world problems.

Someone with experience in any programming language (preferably javascript and python). They must have strong firsthand technical expertise in a variety of tools, problem solving, design thinking and the proven ability to fashion robust scalable solutions that can solve real world problems.

They must be at ease working in an agile environment with little supervision. This person should embody a passion for teamwork, curiosity(asks tough questions and not a conformist) and a knack for continuous growth and learning

Key Responsibilities:

- Analyze, design and develop tests and test-automation suites.
- Design and develop software platforms using various technologies; React, Nodejs, Django, Docker, Git, Travis, Kubernetes, gcloud, AWS, Celery, RabbitMQ, NATS, Reddis, Prometheus
- Designing system documents; ERD, systems architecture
- Provide ongoing maintenance, support and enhancements in existing systems and platforms.
- Collaborate cross-functionally with business analysts, business users, project managers, designers and other engineers to achieve elegant solutions.
- Provide recommendations for continuous improvement.

Qualifications and Requirements:

- Experience with test-driven development and automated testing frameworks.
- Experience with Scrum/Agile and SDLC development methodologies.
- Avid reader with urge to stay informed and updated about the technology and any other field
- Experience with database design and tools like Mongo, Postgresql, Mysql
- Experience with microservices architecture or distributed systems
- Experience with software design patterns
- Experience with creating libraries; npm packages
